

Title: Education USDT — Blockchain Education Token

Author: Dr. Ahmet Ünlükaya

Institution: Teknoloji Üniversitesi

Contact: info@usdteducation.com, drahmetunlusoy@gmail.com

1. Purpose

Education USDT (USDT) is a token developed for academic and demonstration purposes in blockchain education. It simulates the appearance and transferability of real tokens while remaining non-spendable on exchanges.

2. Blockchain Implementation

The smart contract is deployed on Binance Smart Chain and implements a customized ERC20-like standard. Tokens are visible and transferable among wallets but cannot be traded or withdrawn. This ensures security and ethical use in educational contexts.

3. Token Details

- **Name:** Education USDT
- **Symbol:** USDT
- **Decimals:** 6
- **Supply:** 10,000,000 USDT
- **Network:** BSC
- **Contract Address:** *(senin adresini ekleyeceğim)*

4. Use Cases

- Blockchain education in universities
- Simulating tokenomics and transfers
- Demonstrating wallet behavior

- Conducting practical exercises without financial risk
